

iSystem

Voice Server

The iSystem is an enterprise class, state of the art communication solution that integrates voice, video and data into a single, robust, reliable platform. Built on standard telephony protocols, the iSystem hosts a variety of solutions that are catered to specific requirements of every business and seamlessly bridges the gaps in enterprise communication needs.

The Voice Server is the core of any iSystem solution which houses the application software. The setup and configuration of the iSystem is done through a web portal which directly translates the voice extension network to business and telephony rules.
